Assignment10-MIT3206-22550119

Assignment 10 : Using Google Maps for Android

Below is a summary of what I have learned and focused on in this assignment.

1. **Android Components**

   - **API level**

Android Version	API Level	Version Name
Android 7.0	24	Nougat

   - **Methods**

No	Method	Description
1	getMyLocation()	This method returns the currently displayed user location
2	clear()	This method removes everything from the map
3	onMapReady():	This function is called when the map is ready to be used
4.	buildGoogleApiClient()	This method is used to initialize the Google Play Services

   - **Permissions**

     uses-permission - Access INTERNET

     uses-permission - ACCESS_FINE_LOCATION

     uses-permission - ACCESS_COARSE_LOCATION

     uses-permission - ACCESS_NETWORK_STATE

     uses-permission - ACCESS_BACKGROUND_LOCATION

- **Special Requirement**

  meta - data   - com.google.android.geo.API KEY

  API Key & Value - "AIzaSyAl39FoH1tCOomeJt568kz2vpgzZdTntyo

  An API key is needed to access the Google Maps servers.

  This key is free and we can use it with any of applications.

- **Newly learned key points in this assignment**
  - How to get Google API Key
  - Working with Map activity

- **Dependencies**

  Dependencies in the build.gradle (:app),
  - implementation libs.play.services.maps

    (implementation 'com.google.android.gms:play-services-maps:19.0.0')
  - implementation libs.play.services.location

    (implementation 'com.google.android.gms:play-services-location:21.3.0')

- **tools:targetApi="34" in AndroidMainfest.xml**

- **uses-feature android:name="android.hardware.touchscreen"**

2. Functionality of the mobile application

- A Location Client to provide location services
- A MapFragment to laying out Android content and display maps
- Develop an Android App which accepts a location or the Place
- Display the relevant map on the screen

3. Running the Application on my android mobile device

I was running the android app for testing in my android mobile device.

My android mobile device is Realme X2 RMX1993.

Below is a photo of my android mobile device (Realme X2 RMX1993) while the app was running.

My android mobile device display setting is set as dark mode option.

Photo 1 : Assignment10-MIT3206-22550119 in Realme X2 RMX1993

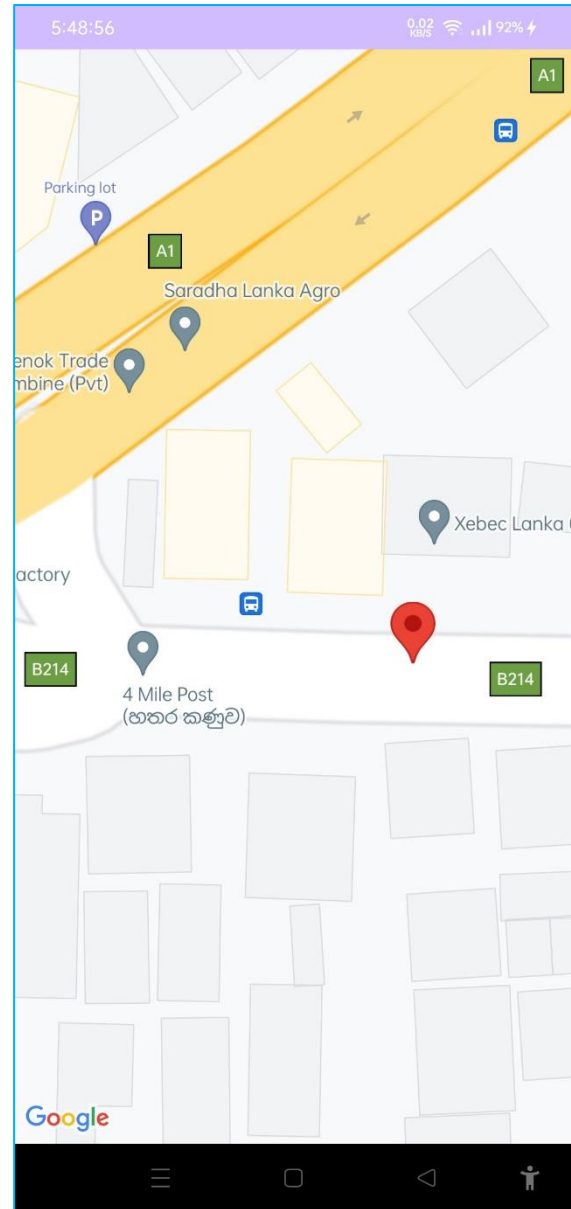

Photo 2 : Assignment10-MIT3206-22550119 in Realme X2 RMX1993

Photo 3 : Assignment10-MIT3206-22550119 in Realme X2 RMX1993

Photo 4 : Assignment10-MIT3206-22550119 in Realme X2 RMX1993

4. Main Coding files

- **MainActivity.java**

```java
package com.assignment10_mit3206_22550119;

import android.Manifest;
import android.content.pm.PackageManager;
import android.location.Location;
import android.os.Bundle;
import android.widget.Toast;

import androidx.annotation.NonNull;
import androidx.core.app.ActivityCompat;
import androidx.fragment.app.FragmentActivity;

import com.google.android.gms.location.FusedLocationProviderClient;
import com.google.android.gms.location.LocationServices;
import com.google.android.gms.maps.CameraUpdateFactory;
import com.google.android.gms.maps.GoogleMap;
import com.google.android.gms.maps.OnMapReadyCallback;
import com.google.android.gms.maps.SupportMapFragment;
import com.google.android.gms.maps.model.LatLng;
import com.google.android.gms.maps.model.MarkerOptions;
import com.google.android.gms.tasks.OnSuccessListener;
import com.google.android.gms.tasks.Task;

public class MainActivity extends FragmentActivity implements
OnMapReadyCallback {
    Location currentLocation;
    FusedLocationProviderClient fusedLocationProviderClient;
    private static final int REQUEST_CODE = 101;
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        fusedLocationProviderClient =
LocationServices.getFusedLocationProviderClient(this);
        fetchLocation();
    }
    private void fetchLocation() {
        if (ActivityCompat.checkSelfPermission(
                this, android.Manifest.permission.ACCESS_FINE_LOCATION) !=
PackageManager.PERMISSION_GRANTED && ActivityCompat.checkSelfPermission(
                this, android.Manifest.permission.ACCESS_COARSE_LOCATION)
!= PackageManager.PERMISSION_GRANTED) {
            ActivityCompat.requestPermissions(this, new
String[]{Manifest.permission.ACCESS_FINE_LOCATION}, REQUEST_CODE);
            return;
        }
        Task<Location> task =
fusedLocationProviderClient.getLastLocation();
        task.addOnSuccessListener(new OnSuccessListener<Location>() {
            @Override
            public void onSuccess(Location location) {
                if (location != null) {
                    currentLocation = location;
                    Toast.makeText(getApplicationContext(),
currentLocation.getLatitude() + "" + currentLocation.getLongitude(),
Toast.LENGTH_SHORT).show();
```

```java
                        SupportMapFragment supportMapFragment =
(SupportMapFragment)
getSupportFragmentManager().findFragmentById(R.id.myMap);
                    assert supportMapFragment != null;
                    supportMapFragment.getMapAsync(MainActivity.this);
                }
            }
        });
    }
    @Override
    public void onMapReady(GoogleMap googleMap) {
        LatLng latLng = new LatLng(currentLocation.getLatitude(),
currentLocation.getLongitude());
        MarkerOptions markerOptions = new
MarkerOptions().position(latLng).title("I am here!");
        googleMap.animateCamera(CameraUpdateFactory.newLatLng(latLng));
        googleMap.animateCamera(CameraUpdateFactory.newLatLngZoom(latLng,
5));
        googleMap.addMarker(markerOptions);
    }
    @Override
    public void onRequestPermissionsResult(int requestCode, @NonNull
String[] permissions, @NonNull int[] grantResults) {
        switch (requestCode) {
            case REQUEST_CODE:
                if (grantResults.length > 0 && grantResults[0] ==
PackageManager.PERMISSION_GRANTED) {
                    fetchLocation();
                }
                break;
        }
    }
}
```

- **activity_main.xml**

```xml
<?xml version="1.0" encoding="utf-8"?>

<androidx.fragment.app.FragmentContainerView
    xmlns:android="http://schemas.android.com/apk/res/android"
